## PROFESSIONAL SUMMARY

Computer Science Engineering student (B.Tech, Chandigarh University, CGPA 7.66) with hands-on experience building full-stack applications using C++, Python, JavaScript, and SQL. Solved 170+ Data Structures & Algorithms problems on LeetCode and GeeksforGeeks, and recognized as a Semi-National Finalist at Flipkart GRID 7.0. IBM-certified in SQL with practical exposure to REST APIs, relational databases, and the software development lifecycle. Open-source contributor (GSSoC 2025) seeking an entry-level Software Engineer / Software Developer role to apply strong problem-solving and full-stack development skills.

## TECHNICAL SKILLS

- **Languages:** C++, Python, JavaScript, HTML5, CSS3, SQL
- **Databases:** MySQL, PostgreSQL, SQLite
- **Concepts:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems, Software Development Life Cycle (SDLC), REST API Design
- **Tools & Platforms:** Git, GitHub, VS Code, Flask, scikit-learn, Google Colab, Windows

## EDUCATION

| <b>Fruit Classification using KNN</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <i>Python, scikit-learn, Machine Learning</i> |
| <ul style="list-style-type: none"><li>• Built a K-Nearest Neighbors classification model to classify fruits based on physical features such as weight, size, and color score.</li><li>• Preprocessed the dataset with manual label encoding and feature scaling to improve model accuracy.</li><li>• Resolved a Time Limit Exceeded (TLE) issue by switching to the ball_tree algorithm, significantly reducing prediction time.</li><li>• Tuned hyperparameters (k-value, distance metric) and evaluated performance using accuracy and cross-validation.</li></ul>                                                                                                                                                     |                                               |

## ACHIEVEMENTS & EXTRACURRICULARS

- Solved 170+ Data Structures & Algorithms problems on LeetCode and GeeksforGeeks, strengthening problem-solving and coding proficiency.
- Semi-National Finalist, Flipkart GRID 7.0 — recognized among top teams nationally in a large-scale hackathon.
- Open-source contributor, GSSoC 2025 — contributed to live web development projects in a collaborative, version-controlled environment.
- Content Team Member, NAVPRAYAS — created and managed digital content, building communication and teamwork skills.
